

Medication support policy

This policy explains how care workers support people with their medicines at home. It follows NICE guideline NG67 and the Care Inspectorate Wales guidance on managing medicines.

There are three levels of support: prompting, assisting and administering. The level for each person is recorded in their care plan and on the medication administration record (MAR chart).

Care workers must not crush tablets unless a pharmacist has confirmed it is safe. Controlled drugs require two signatures. Any error must be reported to the office on the same day.
